

Meet Shah

Cloud & DevOps Engineer | AWS | Terraform | Kubernetes | CI/CD | Python | Infrastructure as Code

Toronto, ON | hire@meetshahdev.com | linkedin.com/in/meetjain | meetshahdev.com

Canadian Permanent Resident | Open to hybrid, remote, and contract engagements

PROFESSIONAL SUMMARY

AWS-certified Cloud & DevOps Engineer with 3+ years across cloud infrastructure, automation, and software engineering, currently designing and operating AWS environments for client engagements. Specializes in Terraform-based Infrastructure as Code, CI/CD pipeline design, containerized workloads, and AWS Well-Architected security, reliability, and cost optimization. Experienced in migrating workloads to AWS, standardizing multi-environment provisioning, and building observability and disaster recovery into production systems. Works with agentic AI coding tools including Claude Code and OpenAI Codex, and builds production RAG pipelines and AI agents on Amazon Bedrock. Holds three AWS Associate certifications and HashiCorp Terraform Associate.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, ECS/Fargate, EKS, Lambda, S3, RDS, DynamoDB, VPC, Transit Gateway, Route 53, ELB/ALB, Auto Scaling, IAM, KMS, Secrets Manager, API Gateway, Step Functions, CloudWatch, CloudTrail, GuardDuty, Organizations, Control Tower); Azure and GCP fundamentals

Infrastructure as Code: Terraform (reusable modules, remote state, workspaces), Terragrunt, CloudFormation, Ansible, Helm

CI/CD & Automation: GitHub Actions, Jenkins, GitLab CI, AWS CodePipeline/CodeBuild, ArgoCD/GitOps, blue-green and canary deployments, Git branching strategies, automated testing gates

Containers & Orchestration: Docker, Kubernetes (EKS), ECS Fargate, ECR, image scanning, Helm charts

AI-Assisted Engineering: Claude Code, OpenAI Codex, GitHub Copilot; agentic coding workflows for Terraform module scaffolding, test generation, repository-wide refactors, CI failure triage, and runbook documentation, with human review on every change

Applied AI & GenAI: Amazon Bedrock, OpenAI, Anthropic, LangChain/LangGraph, RAG pipelines (chunking, embeddings, retrieval, reranking), AI agents, tool calling, Model Context Protocol (MCP), vector databases (OpenSearch, pgvector), OpenRouter routing

Observability & Reliability: CloudWatch, Prometheus, Grafana, Datadog, centralized logging, alerting, SLIs/SLOs, incident response and on-call, high availability, multi-AZ, disaster recovery (RTO/RPO), backup and restore

Security & Governance: IAM least privilege, security groups and NACLs, encryption at rest and in transit, secrets management, AWS Well-Architected reviews, tagging and compliance standards, audit support

Programming & Data: Python (boto3), Bash, SQL, PostgreSQL, MySQL, REST APIs, ETL and data pipelines, Linux administration

Practices: Agile/Scrum, cloud migration planning, cost optimization and FinOps, architecture documentation, code review

PROFESSIONAL EXPERIENCE

Cloud Solution Architect | Arihant eSolutions Inc.

Apr 2025 – Present | Toronto, ON

- Cut new client environment provisioning from three days of manual console work to under two hours, by building a library of 15+ reusable Terraform modules with S3 remote state, DynamoDB state locking, and per-environment workspaces spanning development, staging, and production.
- Delivered AWS architectures across 8+ client engagements, each documented and reviewed against the AWS Well-Architected Framework, by translating business requirements into designs covering VPC and hybrid networking, EC2, S3, RDS Multi-AZ, IAM, Lambda, API Gateway, and CloudWatch.
- Migrated 20+ application workloads to AWS with every cutover completed inside its scheduled maintenance window, by owning target architecture, dependency mapping, cutover sequencing, security review, rollback planning, and post-migration validation.
- Reduced release time from a 45-minute manual multi-step process to a 12-minute automated pipeline, by designing CI/CD in Jenkins, GitHub Actions, and AWS CodePipeline covering build, test, container image scanning, and Terraform plan/apply behind a manual approval gate.
- Eliminated roughly 10 hours of manual operations work per month, by automating snapshot lifecycle management, tagging compliance checks, and infrastructure drift detection with Python (boto3) and Bash.
- Reduced client monthly AWS spend by ~22% and closed 30+ IAM, logging, and backup findings, by leading cost and security reviews that right-sized over-provisioned EC2 and RDS instances, reclaimed orphaned EBS volumes, snapshots, and Elastic IPs, and tracked remediation with engineering teams.

- Brought client environments to their contracted recovery time and recovery point objectives, by defining backup, disaster recovery, and monitoring standards including multi-AZ failover, automated snapshots, and CloudWatch alarms.

Cloud Support Engineer | Arihant eSolutions Inc.

Oct 2024 – Mar 2025 | Toronto, ON

- Resolved 200+ support tickets across EC2, RDS, S3, VPC connectivity, and IAM access within agreed response targets, by reproducing issues with client teams, applying fixes, and confirming resolution before closure.
- Kept infrastructure alert acknowledgement under 15 minutes during covered hours, by monitoring CloudWatch dashboards, alarms, and logs for instance health, storage capacity, and failed jobs, and escalating to senior engineers with root-cause context attached.
- Reduced time spent on recurring support requests by roughly 30%, by scripting log retrieval, resource inventory, and snapshot cleanup with Python (boto3) and Bash.
- Shortened escalation handoff time and standardized first response, by authoring 10+ runbooks and troubleshooting guides covering the team's most common incident types.
- Maintained backup and patch compliance across multiple client accounts, by verifying snapshot restores, applying patches, renewing certificates, and auditing resource tagging on a recurring schedule.

Software Engineer | Mobiuso

Nov 2020 – Nov 2021 | Remote

- Supported migration of 20+ on-premises workloads from in-house servers to AWS, by working hands-on with EC2, S3, RDS, IAM, CloudWatch, Lambda, and Step Functions alongside a senior engineer.
- Connected applications to internal data services in support of production workflows, by developing and integrating REST APIs in Python and Perl.
- Delivered recurring reporting relied on by business stakeholders, by building Python and Perl ETL scripts and writing SQL against PostgreSQL and MySQL to power Tableau dashboards and Excel reports.

Software Engineer Intern | Radixweb

May 2019 – Dec 2019 | Ahmedabad, India

- Shipped backend features for client web applications, by building and maintaining components in Python (Django/Flask) and JavaScript/Node.js alongside senior developers.
- Enabled integration between application components, by developing REST APIs and working with PostgreSQL and MongoDB for queries and validation.
- Resolved defects in existing production codebases, by debugging with application logs and code tracing within Git-based Agile workflows including peer review, sprint planning, and release coordination.

TECHNICAL PROJECTS

orin.finance | Cloud-Native Financial Analytics Platform | AWS, Terraform, Python, PostgreSQL

- Built and operate the platform's entire production AWS footprint as version-controlled code, by provisioning VPC, ECS Fargate services, RDS PostgreSQL, Lambda, S3, and API Gateway in Terraform with GitHub Actions CI/CD and remote state in S3 with DynamoDB locking.
- Ingest SEC EDGAR and market data without duplicate or partial loads, by building Python pipelines that handle rate limiting, retries with backoff, schema validation, and idempotent upserts into PostgreSQL.
- Grounded model responses in source filings rather than general model knowledge, by building a RAG pipeline on Amazon Bedrock using LangChain/LangGraph, embedding generation, and vector search with citations back to source documents.
- Lowered inference cost while sustaining availability through provider degradation, by implementing multi-provider LLM routing with cost- and latency-aware model selection, automatic fallback, per-request cost tracking, and agent tool calling over MCP.
- Accelerated feature delivery and large refactors, by using Claude Code and OpenAI Codex for Terraform scaffolding, implementation, and CI failure triage, with human review and a clean terraform plan required on every merge.
- Eliminated long-lived credentials from application code and CI configuration, by enforcing least-privilege IAM roles, KMS encryption, and AWS Secrets Manager across all services.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate • AWS Certified Data Engineer – Associate • AWS Certified Machine Learning Engineer – Associate

HashiCorp Certified: Terraform Associate (003) • Oracle Cloud Infrastructure 2024 Generative AI Certified Professional

EDUCATION

Post-Graduate Diploma, Cloud Computing for Big Data | Lambton College

2022 – 2024 | Toronto, ON

B.Tech., Computer Science and Engineering | Parul University

2016 – 2020 | India
